

Supplemental Figure 1. ENDscript 2.0 secondary structure mapping of chain A of the TgAldolase structure.

DEFINITIONS:

R-FACTOR
 observed = (SUM(ABS(I(h,i)-I(h)))/(SUM(I(h,i)))
 expected = expected R-FACTOR derived from Sigma(I)

COMPARED = number of reflections used for calculating R-FACTOR
 I/SIGMA = mean of intensity/Sigma(I) of unique reflections
 (after merging symmetry-related observations)
 Sigma(I) = standard deviation of reflection intensity I
 estimated from sample statistics

R-meas = redundancy independent R-factor (intensities)
 Diederichs & Karplus (1997), Nature Struct. Biol. 4, 269-275.

CC(1/2) = percentage of correlation between intensities from
 random half-datasets. Correlation significant at
 the 0.1% level is marked by an asterisk.
 Karplus & Diederichs (2012), Science 336, 1030-33

Anomal_Corr = percentage of correlation between random half-sets
 of anomalous intensity differences. Correlation
 significant at the 0.1% level is marked.

SigAno = mean anomalous difference in units of its estimated
 standard deviation ($|F(+)-F(-)|/\text{Sigma}$). F(+), F(-)
 are structure factor estimates obtained from the
 merged intensity observations in each parity class.

Nano = Number of unique reflections used to calculate
 Anomal_Corr & SigAno. At least two observations
 for each (+ and -) parity are required.

SUBSET OF INTENSITY DATA WITH SIGNAL/NOISE ≥ -3.0 AS FUNCTION OF RESOLUTION
