Received 6 December 2007; accepted 1 January 2008

Key indicators: single-crystal X-ray study; $T = 291$ K; mean $\sigma(C-C) = 0.010$ Å;
 R factor = 0.046; wR factor = 0.111; data-to-parameter ratio = 13.2.

The title compound, $(\text{NH}_4)_2[\text{Cu}(\text{C}_2\text{H}_4\text{NO}_2)(\text{C}_{10}\text{H}_8\text{N}_2)(\text{C}_3\text{H}_7\text{NO})_2]\text{[Mo}_8\text{O}_{26}]$, contains a centrosymmetric β -type octamolybdate anion, two copper(II) complex cations and two ammonium ions. The Cu^{II} atom is coordinated in a square-pyramidal geometry by a 2,2'-bipyridine and a 2-aminoacetate ligands in the basal plane and by an O atom of N,N -dimethylformamide in the apical position. The anions and cations are linked by N—H···O hydrogen bonds into a three-dimensional network.

S1. Comment

Polymolybdates (POMs) modified by transition metal complexes have been extensively explored (Allis *et al.*, 2004). To further explore new POMs belonging to this family, the title compound is reported here.

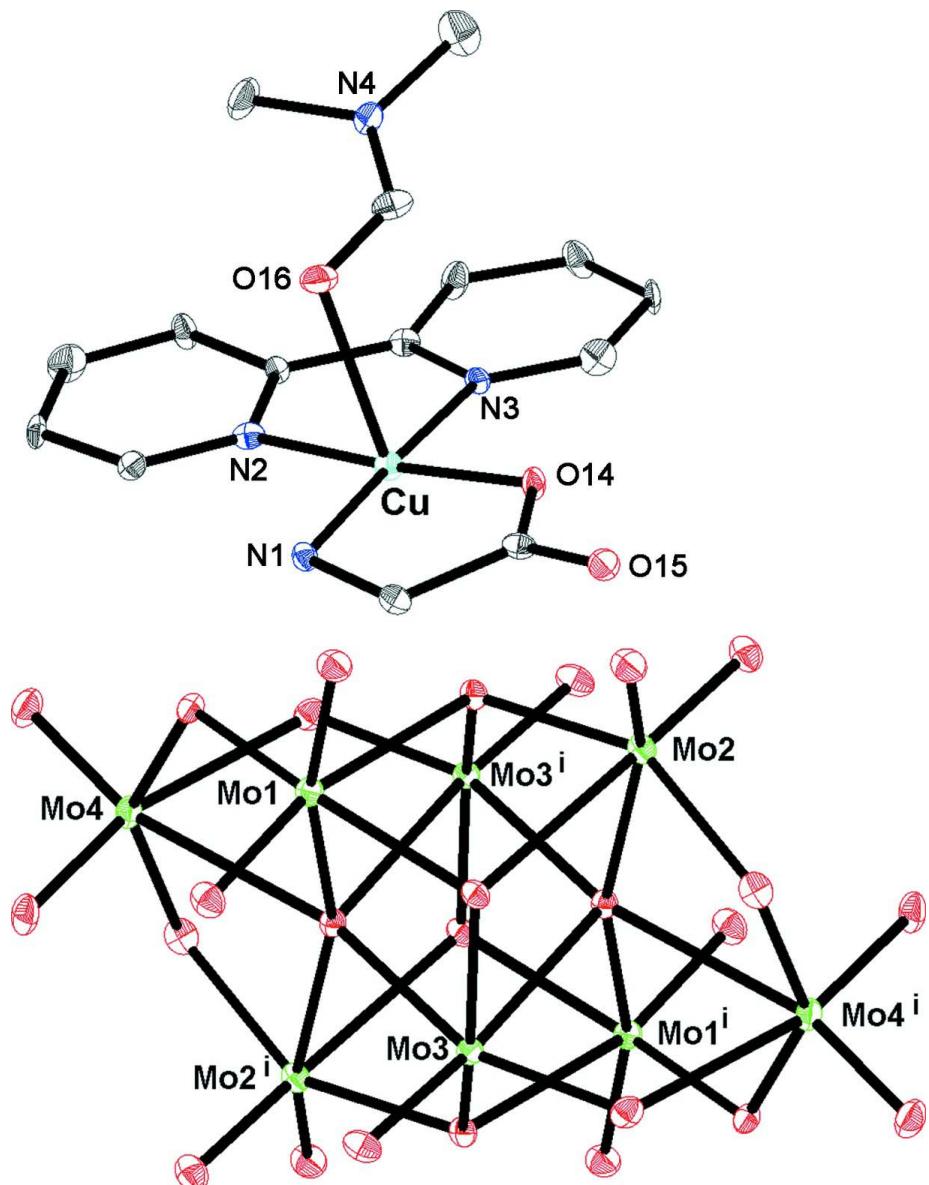

The title compound consists of a $[\text{Mo}_8\text{O}_{26}]^{4-}$ anion, two $[\text{Cu}(\text{bpy})(\text{gly})(\text{dmf})]^+$ cations and two ammonium ions ($\text{bpy} = 2,2'\text{-bipyridine}$, $\text{gly} = 2\text{-aminoacetate}$, $\text{dmf} = N,N\text{-dimethylformamide}$) (Fig. 1). The $[\text{Mo}_8\text{O}_{26}]^{4-}$ anion in the β -type lies on an inversion center, made up of eight edge-sharing MoO_6 octahedra. The Cu^{II} atom in the $[\text{Cu}(\text{bpy})(\text{gly})(\text{dmf})]^+$ cation displays a distorted square-pyramidal geometry with two N atoms from the 2,2'-bipyridine ligand and an O atom and an N atom from the 2-aminoacetate ligand in the basal plane and an O atom of $N,N\text{-dimethylformamide}$ in the apical position. The Mo—O, Cu—N and Cu—O distances are given in Table 1. A calculation of bond valence sum (Brown & Altermatt, 1985) indicates the oxidation states of 5.71–5.84 for the Mo atoms and 2.17 for the Cu atom, in agreement with the expected values. These anions and cations connect to each other by N—H···O hydrogen bonds (Table 2), forming a three-dimensional supramolecular network, as shown in Fig. 2.

S2. Experimental

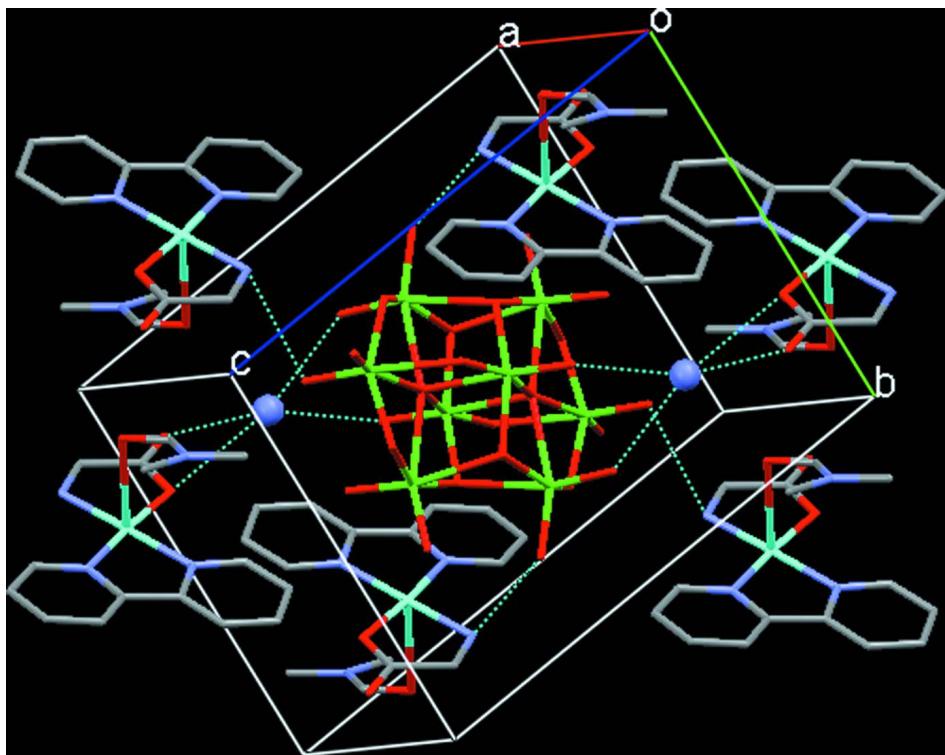

$(\text{NH}_4)_6(\text{Mo}_7\text{O}_{24}) \cdot 4\text{H}_2\text{O}$ (1.50 g, 1.2 mmol), $\text{Cu}(\text{CH}_3\text{COO})_2 \cdot 2\text{H}_2\text{O}$ (0.20 g, 1.0 mmol), 2-aminoacetic acid (0.075 g, 1.0 mmol) and bpy (0.16 g, 1.0 mmol) were dissolved in 0.5 M HCl solution (15 ml) with stirring. Then the suspension was added to a dmf solution (10 ml), which was refluxed at 333 K for 3 h. After cooling to room temperature, the mixture was filtrated and transferred into a 50 ml beaker. Blue block crystals of the title compound suitable for X-ray diffraction were obtained after several days.

S3. Refinement

H atoms of ammonium were located in difference Fourier maps and fixed in their as-found positions ($\text{N—H} = 0.90\text{--}0.98 \text{\AA}$) with $U_{\text{iso}}(\text{H}) = 1.2U_{\text{eq}}(\text{N})$. The other H atoms were positioned geometrically and refined as riding atoms, with $\text{C—H} = 0.93 \text{\AA}$ (CH), 0.97\AA (CH_2), $\text{N—H} = 0.90 \text{\AA}$ and $U_{\text{iso}}(\text{H}) = 1.2U_{\text{eq}}(\text{C},\text{N})$, and with $\text{C—H} = 0.96 \text{\AA}$ (CH_3) and $U_{\text{iso}}(\text{H}) = 1.5U_{\text{eq}}(\text{C})$.

**Figure 1**

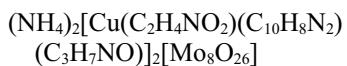

The structures of the anion and cation of the title compound (the ammonium ion has been omitted). Displacement ellipsoids are drawn at the 30% probability level. [Symmetry code: (i) $1 - x, 1 - y, 1 - z$.]

**Figure 2**

Crystal packing of the title compound. The ammonium ions are drawn as ball. Dotted lines denote hydrogen bonds.

Geometry. All e.s.d.'s (except the e.s.d. in the dihedral angle between two l.s. planes) are estimated using the full covariance matrix. The cell e.s.d.'s are taken into account individually in the estimation of e.s.d.'s in distances, angles and torsion angles; correlations between e.s.d.'s in cell parameters are only used when they are defined by crystal symmetry. An approximate (isotropic) treatment of cell e.s.d.'s is used for estimating e.s.d.'s involving l.s. planes.
