Received 1 October 2010; accepted 21 October 2010

Key indicators: single-crystal X-ray study; $T = 293\text{ K}$; mean $\sigma(\text{C}-\text{C}) = 0.007\text{ \AA}$; R factor = 0.040; wR factor = 0.079; data-to-parameter ratio = 16.9.

The title compound, $\{[\text{Cu}_2\text{I}_2(\text{C}_{12}\text{H}_8\text{N}_6)(\text{C}_{18}\text{H}_{15}\text{P})_2]\cdot 2\text{CH}_3\text{CN}\}_n$, contains centrosymmetric dinuclear $\text{Cu}_2\text{I}_2(\text{PPh}_3)_2$ units bridged by 3,6-bis(4-pyridyl)-1,2,4,5-tetrazine ligands lying also across crystallographic inversion centers, giving a chain structure in the ab plane. The distorted tetrahedral Cu^{I} atoms in the dinuclear unit are coordinated by two bridging iodide anions, one pyridine N atom from the substituted tetrazine ligand and one terminal triphenylphosphine P-atom donor. The $\text{Cu}\cdots\text{Cu}$ distance is $2.8293(12)\text{ \AA}$, implying a weak $\text{Cu}\cdots\text{Cu}$ interaction.

S1. Comment

Metal-organic frameworks have attracted great attention in recent years not only because of their intriguing structures (Eddaoudi *et al.*, 2001) but also their potential applications (Banerjee *et al.*, 2008; Zhang *et al.*, 2007). Long bridging ligands can be employed for the construction of interesting metal-organic frameworks (Withersby *et al.*, 2000). The extended bridging ligand 2,6-bis(4-pyridyl)-1,2,4,5-tetrazine was used to synthesize the title compound $\{[\text{Cu}_2\text{I}_2(\text{C}_{12}\text{H}_8\text{N}_6)((\text{C}_6\text{H}_5)_3\text{P})_2 \cdot 2(\text{CH}_3\text{CN})\}_n$ (3,6-di₂(PPh₃)₂ (I)) by using a diffusion reaction and the crystal structure is presented here.

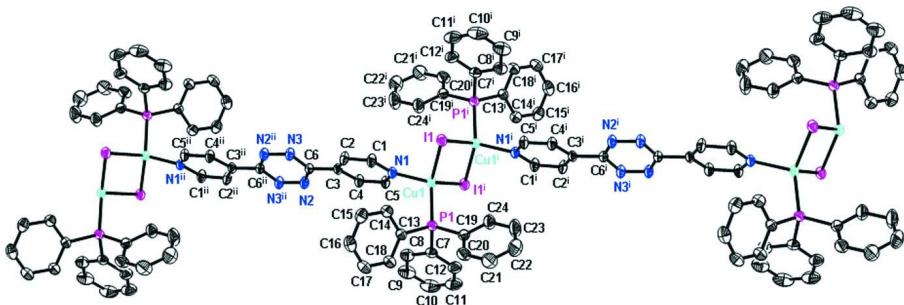

The centrosymmetric dinuclear Cu₂I₂(PPh₃)₂ complex units in (I) are linked by the extended 3,6-di-4-pyridyl-1,2,4,5-tetrazine ligands, also lying across crystallographic inversion centers, giving a one-dimensional chain structure (Fig. 1). Each tetrahedral Cuⁱ centre in the dinuclear unit is coordinated by two bridging I anions [Cu—I, 2.6412 (9), 2.6603 (9) Å], one pyridine-N from the bridging substituted tetrazine ligand [Cu—N, 2.066 (3) Å] and one terminal triphenylphosphine P-donor [Cu—P, 2.2388 (11) Å]. The Cu···Cuⁱ distance is 2.8293 (12) Å, implying a weak Cu···Cu interaction [symmetry code: (i) -x, -y, -z].

S2. Experimental

CuI (0.1 mmol) and triphenylphosphine (0.2 mmol) were added to a mixture of 3 ml of dimethylformamide and 2 ml of H₃CN with thorough stirring for 2 minutes. After filtering, the filtrate was carefully layered with a solution of 0.1 mmol 3,6-bis(4-pyridyl)-1,2,4,5-tetrazine in 3 ml of CH₂Cl₂. Blue block crystals were obtained after two weeks.

S3. Refinement

H atoms were positioned geometrically with C—H(phenyl, pyridyl) = 0.93 Å or 0.96 Å (methyl) and refined using a riding model, with $U_{\text{iso}}(\text{H}) = 1.2U_{\text{eq}}(\text{C})_{\text{phenyl, pyridyl}}$ or $1.5U_{\text{eq}}(\text{C})_{\text{methyl}}$.

**Figure 1**

The molecular structure of a portion of the title compound, with atom labels and 30% probability displacement ellipsoids. All H atoms have been omitted. Symmetry codes: (i) $-x, -y, -z$; (ii) $-x + 1, -y - 1, -z$.

Special details

Geometry. All e.s.d.'s (except the e.s.d. in the dihedral angle between two l.s. planes) are estimated using the full covariance matrix. The cell e.s.d.'s are taken into account individually in the estimation of e.s.d.'s in distances, angles and torsion angles; correlations between e.s.d.'s in cell parameters are only used when they are defined by crystal symmetry. An approximate (isotropic) treatment of cell e.s.d.'s is used for estimating e.s.d.'s involving l.s. planes.

Refinement. Refinement of F^2 against ALL reflections. The weighted R -factor wR and goodness of fit S are based on F^2 , conventional R -factors R are based on F , with F set to zero for negative F^2 . The threshold expression of $F^2 > \sigma(F^2)$ is used only for calculating R -factors(gt) etc. and is not relevant to the choice of reflections for refinement. R -factors based on F^2 are statistically about twice as large as those based on F , and R -factors based on ALL data will be even larger.
