Received 14 April 2012; accepted 16 April 2012

Key indicators: single-crystal X-ray study; $T = 296$ K; mean $\sigma(\text{C}-\text{C}) = 0.003$ Å; R factor = 0.038; wR factor = 0.092; data-to-parameter ratio = 20.1.

In the title compound, $\text{C}_{14}\text{H}_{18}\text{ClNS}$, the 2,3-dihydro-1,3-thiazole ring adopts an envelope with the S,N-bound C atom at the flap and the cyclohexane ring adopts a chair conformation. In the crystal, $\text{N}-\text{H}\cdots\text{S}$ hydrogen bonds with $\text{C}(5)$ motifs connect the molecules into chains parallel to the c axis.

S1. Comment

Efforts to design, synthesize and screen new molecules that mimic the actions of currently available chemotherapeutics have resulted in numerous promising candidates incorporating the benzothiazole moiety. Benzothiazolines and spiro-benzothiazolines, the cyclic products obtained by the condensation of aldehydes and ketones with 2-aminothiophenoles were previously reported to exhibit antitubercular (Palmer *et al.*, 1971), analgesic (Coudert *et al.*, 1988) and antioxidant (Karalı *et al.*, 2010) properties. In this context, the title compound was prepared by the condensation of 4-ethylcyclohexanone with 2-amino-4-chlorothiophenol in an attempt to obtain a new molecule with antioxidant action and to establish its definite structure *via* analytical, spectroscopic and crystallographic data.

In the title compound (I), (Fig. 1), the S1/N1/C1/C6/C7 2,3-dihydro-1,3-thiazole ring adopts an envelope conformation with the C7 atom at the flap [puckering parameters (Cremer & Pople, 1975): $Q(2) = 0.2817(18) \text{ \AA}$, $\varphi(2) = 144.3(4)^\circ$]. The C7—C12 cyclohexane ring adopts a chair conformation [puckering parameters: $Q_T = 0.552(2) \text{ \AA}$, $\theta = 180.0(2)^\circ$ and $\varphi = 337(7)^\circ$]. The bond lengths of (I) are within the expected values (Allen *et al.*, 1987).

In the crystal, molecules are linked by intermolecular N1—H1N \cdots S1 hydrogen bonds (Table 1 and Figs. 2 & 3), forming C(5) motifs (Bernstein *et al.*, 1995) as chains parallel to the *c* axis.

S2. Experimental

A mixture of 2-amino-4-chlorothiophenol (0.01 mol) and 4-ethylcyclohexanone (0.01 mol) in absolute ethanol (50 ml) was refluxed on a water bath for 8 h. The solvent was evaporated in a crystallizing dish at room temperature and the residue was recrystallized from ethanol. [Yield: 45.5%, m.p.: 381–383 K]. IR (KBr) $\nu = 3310$ (N—H), 2960, 2916, 2893 (C—H), 1585, 1562, 1469, 1448 (C=C) cm^{-1} ; $^1\text{H-NMR}$ (DMSO- d_6 , 500 MHz) $\delta = 0.85\text{--}0.87$ (3*H*, m, 4'-CH₂—CH₃-cyc.), 1.00–1.16 (2*H*, m, CH/CH₂-cyc.), 1.17–1.34 (3*H*, m, 4'-CH₂—CH₃ and CH/CH₂-cyc.), 1.57–1.73 (4*H*, m, CH/CH₂-cyc.), 2.07–2.13 (2*H*, m, CH/CH₂-cyc.), 6.41, 6.47–6.50 (2*H*, d, $J=2.0$ Hz and m, H4 and H6-bt.), 6.90 (1*H*, d, $J=8.3$ Hz, H7-bt.), 6.74, 6.94 (1*H*, 2 s, NH) p.p.m. (Peaks at δ 6.74 and 6.94 disappeared on D₂O exchange) (cyc.=cyclohexane, bt.=benzothiazole). Analysis calculated for C₁₄H₁₈ClNS: C 62.79, H 6.77, N 5.23%. Found: C 62.63, H 6.79, N 5.24%.

S3. Refinement

C-bound H atoms were placed geometrically with the C—H distance of 0.93, 0.96, 0.97 and 0.98 \AA , for the aromatic, methyl, methylene and methine H atoms, respectively and refined by using the riding model [$U_{\text{iso}}(\text{H}) = xU_{\text{eq}}(\text{C})$, $x = 1.5$ for methyl H and 1.2 for all other carbon-bound H atoms. The nitrogen-bound H atom were located in a difference Fourier map and refined freely with the constraint N—H = 0.86 (2) \AA .

Figure 1

The title compound with the atom numbering scheme. Displacement ellipsoids for non-H atoms are drawn at the 50% probability level.

Figure 2

The packing and hydrogen bonding of the title molecule in the unit cell, viewing down *a* axis. H atoms not involved in hydrogen bonds have been omitted for clarity.

Figure 3

The packing and hydrogen bonding of the title molecule in the unit cell, viewing down *c* axis. H atoms not involved in hydrogen bonds have been omitted for clarity.

Special details

Geometry. Bond distances, angles *etc.* have been calculated using the rounded fractional coordinates. All su's are estimated from the variances of the (full) variance-covariance matrix. The cell e.s.d.'s are taken into account in the estimation of distances, angles and torsion angles

Refinement. Refinement on F^2 for ALL reflections except those flagged by the user for potential systematic errors. Weighted R -factors wR and all goodnesses of fit S are based on F^2 , conventional R -factors R are based on F , with F set to zero for negative F^2 . The observed criterion of $F^2 > \sigma(F^2)$ is used only for calculating $-R$ -factor-obs *etc.* and is not relevant to the choice of reflections for refinement. R -factors based on F^2 are statistically about twice as large as those based on F , and R -factors based on ALL data will be even larger.
