The structure of bis(cobaltocenium) tetrachloridocobaltate(II) dichloromethane 1.2-solvate, $[\text{Co}(\text{C}_5\text{H}_5)_2]_2[\text{CoCl}_4] \cdot 1.2\text{CH}_2\text{Cl}_2$, has been determined at 100 K. The title compound crystallizes in the space group $P\bar{1}$ and is an example of an unusual $Z' = 5$ structure. The asymmetric unit contains ten cobaltocenium ions, five tetrachloridocobaltate(II) ions and six molecules of dichloromethane, *i.e.* $5[\text{Cp}_2\text{Co}]_2[\text{CoCl}_4] \cdot 6\text{CH}_2\text{Cl}_2$. All the cobaltocenium ions are determined to be in the eclipsed conformation with respect to the cyclopentadienyl rings.

Chemical scheme

Structure description

The cell parameters of $[\text{Cp}_2\text{Co}]_2[\text{CoCl}_4]$ ($\text{Cp} = \eta^5\text{-C}_5\text{H}_5$) have been previously reported (Gunter *et al.*, 1970). The molecular structure of the unsolvated compound has not been reported, but it appears to be a single-chain magnetic material [Balaji *et al.*, 2010]. A small number of cobaltocenium derivatives with the $[\text{CoCl}_4]^{2-}$ counter-ion have been reported (Herberhold *et al.*, 2000; Braga *et al.*, 2005; Ransom *et al.*, 2009; Merola *et al.*, 2013). The title compound is the dichloromethane solvate of the parent compound $[\text{Cp}_2\text{Co}]_2[\text{CoCl}_4]$.

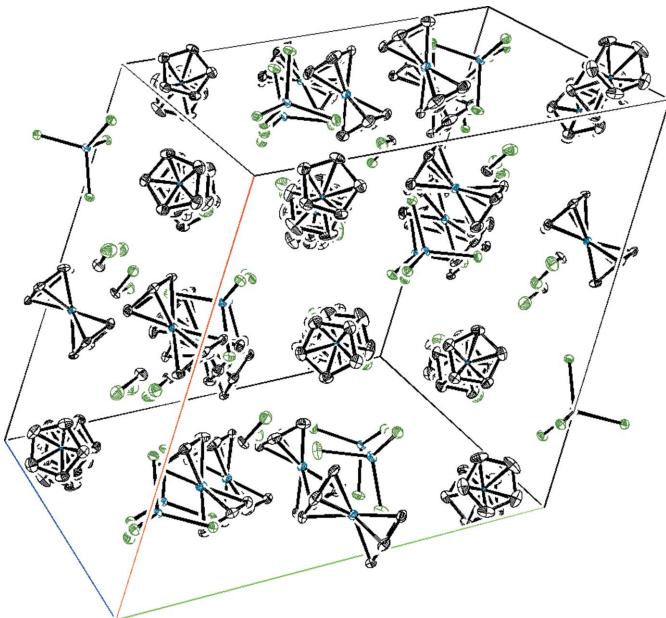

The basic components of the compound are shown in Fig. 1. Each asymmetric unit in the unit cell contains five of the $[\text{Cp}_2\text{Co}]_2[\text{CoCl}_4] \cdot \text{CH}_2\text{Cl}_2$ groups pictured in addition to one extra molecule of CH_2Cl_2 , and is an example of a $Z' = 5$ structure. One of the five $[\text{CoCl}_4]^{2-}$ ions in the asymmetric unit is pictured in Fig. 1. Bond distances for atoms labelled $\text{Co1K}-\text{Cl1K}$, $\text{Co1K}-\text{Cl2K}$, $\text{Co1K}-\text{Cl3K}$, and $\text{Co1K}-\text{Cl4K}$ are 2.2792 (9), 2.2685, 2.2819 (9), and 2.2860 (9) Å, respectively. The bond angles in this $[\text{CoCl}_4]^{2-}$ ion vary from 106.83 (3) to 112.28 (3)°. These parameters are typical for the $[\text{CoCl}_4]^{2-}$

**Figure 1**

Portion of the unit cell (fractional coordinates x : 0.3 – 1/2, y : 0.1 – 0.5; z : 0.2 – 1/2) showing the formula $[Cp_2Co]_2[CoCl_4]\cdot CH_2Cl_2$. Displacement ellipsoids for non-hydrogen atoms are drawn at the 50% probability level.

dianion and are comparable to those found in similar compounds (Braga *et al.*, 2005; Ransom *et al.*, 2009; Merola *et al.*, 2013).

In Fig. 1, two cobaltocenium units are pictured. The distances and angles within the cyclopentadienyl rings are typical for such systems, as are the Co–C bond distances, *e.g.* Co1D–C7D is 2.029 (4) Å. Within the Cp rings, typical bond distances and angles are also observed. The cyclopentadienyl rings in each cobaltocenium ion are coplanar with an average dihedral angle between the least squares planes of 2.97 (1)°. Each cobaltocenium ion is in the eclipsed conformation with respect to the cyclopentadienyl rings, with relative rotations in the range of 0.65 (9)–6.30 (9)°, and an average value of 2.97 (9)°. The two $[Cp_2Co]^+$ ions in Fig. 1 are approximately

Computer programs: *SMART* (Bruker, 2007), *SAINT* (Bruker, 2007), *SHELXTL* (Sheldrick, 2008), *SHELXL2018* (Sheldrick, 2015), *ORTEP-3 for Windows* (Farrugia, 2012).

related by an S_2 improper axis of rotation through the $[CoCl_4]^{2-}$ unit.

The packing of the ions in the title compound (Fig. 2) is more complicated than found for the related decamethyl-cobaltocenium derivative (Merola *et al.*, 2013), which forms a clear two-dimensional-network of $[(\eta^5-C_5(CH_3)_5)_2Co]^{+}$ -chains parallel to two of its unit cell axes. In the title compound, the cobaltocenium ions alternate with dichloromethane molecules in loose chains, with two sets of parallel chains aligned roughly at right angles to form layers which also include the CH_2Cl_2 and $[CoCl_4]^{2-}$ moieties. The $[CoCl_4]^{2-}$ ions are each surrounded by four $[Cp_2Co]^+$ ions in a distorted tetrahedral arrangement with Co–Co distances in the range of 5.0–5.3 Å.

Synthesis and crystallization

The title compound was obtained serendipitously as a byproduct from the reaction of orange crystals of $CpRu(PPh_3)_2Cl$ (0.2013 g, 0.277 mmol) with sublimed Cp_2Co (0.1150 g, 0.608 mmol, 2.19 equiv) in CH_2Cl_2 (5.0 ml) in a sample vial under an atmosphere of argon in an inert-atmosphere drybox. The sample vial was left undisturbed in the drybox for four months during which time green crystals of $5[Cp_2Co]_2[CoCl_4]\cdot 6CH_2Cl_2$ grew. Exposure to light, such as from a compact fluorescent light bulb, was found to be required for the isolation of the title compound.

Refinement

Crystal data, data collection and structure refinement details are summarized in Table 1.

Acknowledgements

The authors thank Dr Douglas R. Powell of the Department of Chemistry and Biochemistry at the University of Oklahoma for determining this structure.

Primary atom site location: dual	

Special details

Geometry. All esds (except the esd in the dihedral angle between two l.s. planes) are estimated using the full covariance matrix. The cell esds are taken into account individually in the estimation of esds in distances, angles and torsion angles; correlations between esds in cell parameters are only used when they are defined by crystal symmetry. An approximate (isotropic) treatment of cell esds is used for estimating esds involving l.s. planes.
