# Crystal structure of 2-[(naphthalen-2-yl)methyl]isothiuronium bromide

Václav Eigner\*

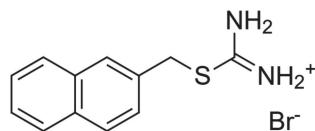

Institute of Physics AS CR, v.v.i., Na Slovance 2, 182 21 Prague 8, Czech Republic. \*Correspondence e-mail: eigner@fzu.cz

Herein we report the crystal structure of 2-[(naphthalen-2-yl)methyl]isothiuronium bromide,  $C_{12}H_{13}N_2S^+\cdot Br^-$ , which crystallizes in the monoclinic  $P2_1/c$  centrosymmetric space group. The asymmetric unit contains one 2-[(naphthalen-2-yl)methyl]isothiuronium cation and one bromide anion. The methylene carbon lies in plane of the naphthalene core. In comparison with reference structures, elongation of C–S bonds as well as tilting of the isothiuronium group is observed. Given the ionic nature of the compound, the structure is held by charge-assisted N–H $\cdots$ Br hydrogen bonds, with a noteworthy contribution of dipole–dipole interactions, which form bilayers in the structure. The bilayers are held by the weak London forces.

## Chemical scheme

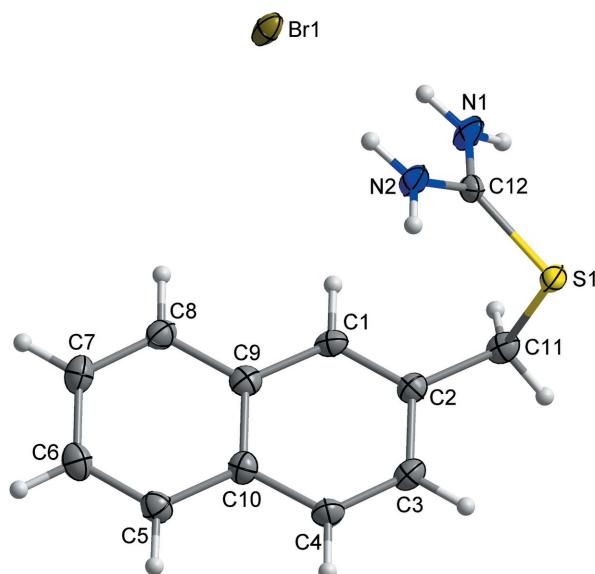

## Structure description

Iothiuronium salts have been investigated because of their ability to bind anions by charge-assisted hydrogen bonds (Yeo & Hong, 1998; Seong *et al.*, 2004). Despite their potential in crystal engineering, only 23 crystal structures of 2-(aryl methyl)isothiuronium salts are present in the CSD (Groom *et al.*, 2016). In our studies of isothiuronium salts, we have managed to synthesize and crystallize naphthalene-2-ylmethyl-bearing isothiuronium bromide, and we report here its structure and a comparison with similar crystal structures.

The title compound crystallizes in the monoclinic  $P2_1/c$  centrosymmetric space group with one 2-[(naphthalen-2-yl)methyl]isothiuronium cation and one bromide anion in the asymmetric unit, see Fig. 1. The naphthalene core is almost perfectly planar, with a maximum deviation of 0.026 (3) Å for atom C6. The C11 atom can be considered to be in the plane of naphthalene core, with a deviation of 0.039 (3) Å from the mean plane. The single bonds around carbon C11 and S1 allow for the free rotation of the isothiuronium group.

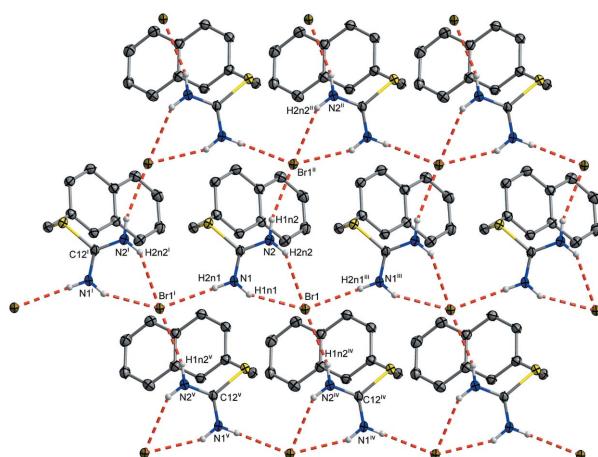

OPEN ACCESS

**Figure 1**

The title compound showing the numbering scheme with displacement ellipsoids drawn at the 50% probability level. H atoms are shown as spheres of arbitrary radius.

There are no 2-[(naphthalen-2-yl)methyl]isothiouronia structures in the CSD; therefore, we decided to compare the title compound with 2-benzylisothiouronia structures. The published structures of 2-benzylisothiouronia can be divided according to the  $C_{\text{ar}}-C_{\text{me}}-\text{S}-C_{\text{th}}$  torsion angle into linear and non-linear groups. Since the relevant torsion angle of the title compound is  $-68.1(3)^\circ$ , only the non-linear 2-benzylisothiouronia will be used as a reference group [CCDC codes EBIFOK (Ishii *et al.*, 2000), IGECIG (Raptopoulou *et al.*, 2002), JALSOE (Mikolajczyk *et al.*, 1989), SEFRUQ (Barker & Powell, 1998), TAWVAP (Stergiou *et al.*, 2005), TOBNEE (Gayathri *et al.*, 2008) and YOCRUE (Fun *et al.*, 2008)]. The  $C2-C11$  bond length of  $1.495(5)$  Å in the title compound is within the usually observed values among the reference group,

**Figure 2**

The charge-assisted hydrogen bonds in the title compound. Hydrogen atoms not involved in hydrogen bonding are omitted for clarity. Symmetry codes: (i)  $x, y - 1, z$ ; (ii)  $x, -y + \frac{3}{2}, z - \frac{1}{2}$ ; (iii)  $x, y + 1, z$ ; (iv)  $x, -y + \frac{3}{2}, z + \frac{1}{2}$ ; (v)  $x, -y + \frac{1}{2}, z + \frac{1}{2}$ .

**Table 1**  
Hydrogen-bond geometry (Å, °).

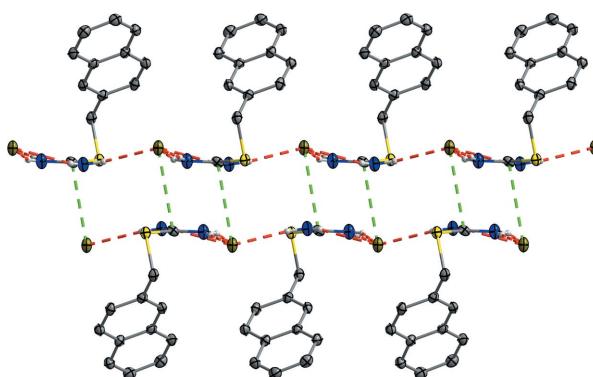

$D-\text{H}\cdots A$	$D-\text{H}$	$\text{H}\cdots A$	$D\cdots A$	$D-\text{H}\cdots A$
$\text{N}1-\text{H}1n1\cdots \text{Br}1$	0.86 (3)	2.54 (3)	3.332 (3)	153 (3)
$\text{N}1-\text{H}2n1\cdots \text{Br}1^{\text{i}}$	0.86 (2)	2.49 (2)	3.350 (3)	180 (3)
$\text{N}2-\text{H}1n2\cdots \text{Br}1^{\text{ii}}$	0.860 (19)	2.55 (3)	3.381 (3)	164 (4)
$\text{N}2-\text{H}2n2\cdots \text{Br}1$	0.86 (3)	2.68 (3)	3.434 (3)	147 (3)

Symmetry codes: (i)  $x, y - 1, z$ ; (ii)  $x, -y + \frac{3}{2}, z - \frac{1}{2}$ .

while the  $\text{C}11-\text{S}1$  and  $\text{S}1-\text{C}12$  bond lengths of  $1.855(3)$  Å and  $1.771(3)$  Å respectively are larger than usually observed, with average values of  $1.819$  Å and  $1.739$  Å. The  $\text{C}2-\text{C}11-\text{S}1$  and  $\text{C}11-\text{S}1-\text{C}12$  angles of  $111.7(2)$  and  $96.98(15)^\circ$ , respectively, are less obtuse than the average values among the reference group,  $115.21$  and  $103.91^\circ$ . This deviation is most likely caused by the difference of electronic behaviour between the benzyl group and the 2-naphthylmethyl unit.

The  $\text{C}11-\text{S}1$  bond is almost perpendicular to the naphthalene core, with  $\text{C}1-\text{C}2-\text{C}11-\text{S}1$  and  $\text{C}3-\text{C}2-\text{C}11-\text{S}1$  torsion angle values of  $91.8(3)$  and  $-88.0(3)^\circ$ , respectively. Among the reference group, such a conformation is unusual, with average values being  $61.45$  and  $120.53^\circ$ . The isothiouronium group is significantly tilted, with  $\text{C}11-\text{S}1-\text{C}12-\text{N}1$  and  $\text{C}11-\text{S}1-\text{C}12-\text{N}2$  torsion angles of  $-68.5(3)$  and  $110.7(3)^\circ$ , respectively. Such a tilt is not observed among the reference group, where the average values are  $20.46$  and  $160.94^\circ$ . The tilting of the group can be explained by the steric demands of the 2-naphthylmethyl unit on the packing.

The  $\text{N}-\text{H}\cdots\text{Br}$  charge-assisted hydrogen bonds (Table 1) have the most significant impact on crystal structure of 2-[(naphthalen-2-yl)methyl]isothiouronium bromide, with every isothiouronium cation forming three hydrogen bonds, one of them bifurcated, with bromide anions. This is a major difference from the structure of 2-benzylisothiouronium chloride (Barker & Powell, 1998), the only structure of 2-arylmethylisothiouronium with simple halide anion, where the isothiouronium group forms four charge-assisted hydrogen bonds with four different chloride anions. The charge-assisted hydrogen bonds form layers in the structure

**Figure 3**

The bilayers formed in the title compound by charge-assisted hydrogen bonds, depicted in red, and dipole–dipole interactions, depicted in green. Hydrogen atoms not involved in hydrogen bonding are omitted for clarity.

through five chains, N1—H1n1···Br1···H2n1<sup>iii</sup>—N1<sup>iii</sup>, and N2—H1n2···Br1<sup>ii</sup>···H2n2<sup>ii</sup>—N2<sup>ii</sup> classified as C<sub>1</sub><sup>2</sup>(4) and N1—H1n1···Br1···H1n2<sup>iv</sup>—N2<sup>iv</sup>—C12<sup>iv</sup>—N1<sup>iv</sup>, N1—H2n1···Br1<sup>i</sup>···H1n2<sup>v</sup>—N2<sup>v</sup>—C12<sup>v</sup>—N1<sup>v</sup>, and N1—H2n1···Br1···H2n2<sup>i</sup>—N2<sup>i</sup>—C12<sup>i</sup>—N1<sup>i</sup> classified as C<sub>1</sub><sup>2</sup>(6) [symmetry codes: (i) x, y — 1, z; (ii) x, —y + 3/2, z — 1/2; (iii) x, y + 1, z; (iv) x, —y + 3/2, z + 1/2; (v) x, —y + 1/2, z + 1/2], see Fig. 2. The layers are connected by dipole–dipole interactions between C12 and Br1<sup>vi</sup> [symmetry code: (vi) —x, y — 1/2, —z + 1/2] with a distance of 3.535 (4) Å into bilayers along the (100) plane, see Fig. 3. The bilayers are held by weak London forces only.

## Synthesis and crystallization

Thiourea (0.23 g, 3 mmol) was dissolved in 25 ml of anhydrous acetonitrile. The solution was then treated with 2-(bromo-

methyl)naphthalene (0.55 g, 2.5 mmol). The reaction mixture was stirred for 4 h at room temperature. The resulting white precipitate was filtered and washed with diethyl ether and left to dry at room temperature, resulting in yield 0.72 g (97%) of 2-[(naphthalen-2-yl)methyl]isothiouronium bromide.

The 2-[(naphthalen-2-yl)methyl]isothiouronium bromide (20 mg) was dissolved in 10 ml of methanol and left to slowly evaporate at room temperature. After 5 d, colorless platelets were collected.

## Refinement

Crystal data, data collection and structure refinement details are summarized in Table 2.

## Funding information

This research was supported by project LO1603 under the Ministry of Education, Youth and Sports National Sustainability Programme I of the Czech Republic..
